Experience

OMERS Toronto, ON

Associate Software Engineer *March 2026 – Present*

- Modernized **15+** workflows used daily by **150+** specialists, moving a legacy PowerBuilder monolith to event-driven **Spring Boot** microservices that make complex processes single transactions, saving **weeks** of manual work.
- Architected an AI-first test orchestration platform replacing a **3-day** manual regression cycle, running **200+** end-to-end tests in parallel across **35+** workflows and cutting new-test authoring from **2 days** to **30 minutes**.
- Built the **IAM** layer for **3** OMERS platforms, a Spring Boot service integrating PingFederate via **OAuth 2.0/OIDC** to manage provisioning, group management, RBAC, and MFA enrollment for all platform users.
- Built a Quartz-based scheduling service in Spring Boot that triggers **100+** time-based workflows weekly across the platform by publishing encrypted events to **Google Cloud Pub/Sub**, with persisted job state in PostgreSQL.
- Migrated **30+** microservices from Java 17 to 25, Spring Boot 3 to 4, and **Kafka** to Pub/Sub in **1 month** with a reusable **GitHub Copilot** agent skill automating each service's upgrade, deploy, and tests.

Software Engineer Intern *May 2025 – March 2026*

- Built a full-stack pension transfer portal (**Next.js**, React, TypeScript) backed by event-driven Spring Boot microservices, designed to cut paper transfers from **1 year** to under **30 days** for **500,000+** members.
- Hardened enterprise microservices for production, fixing **10+** Snyk vulnerabilities, writing **100+** JUnit tests for **80%+** SonarQube coverage, and building **3+ Datadog** dashboards.

LA-Based Software Agency Los Angeles, CA (Remote)

Software Engineer (Contract) *July 2026 – Present*

- Architected an autonomous **agentic AI** platform on the **Claude API**, orchestrating planner, coordinator, and critic agents with **tool calling** to execute construction workflows over SMS within deterministic guardrails.
- Profiled **940+** agent runs, finding long multi-step workflows consumed **6x** more tokens; designed a **self-improving tool layer** where background agents propose, test, and deploy recurring procedures as reusable tools.
- Built an **LLM-as-judge** pass@k evaluation harness, improving planning pass@1 from **46%** to **67%**; implemented **prompt caching** across 1M-token contexts and sandboxed agent code execution for model-generated SQL.

OPTrust Toronto, ON

Software Developer Intern *May 2024 – December 2024*

- Engineered a **Python** and PowerShell ingestion pipeline that parsed, validated, and loaded **30+** source files daily, applying schema validation and automated retries on malformed records to cut manual intake effort by **60%**.
- Built a **RAG** assistant on Azure OpenAI and Azure AI Search for internal questions, fine-tuning GPT-3.5 Turbo on **300+** curated examples and cutting research time by **40%**.

Ontario Public Service Toronto, ON

Software Developer Intern *May 2023 – August 2023*

- Fixed **3** SQL injection vulnerabilities in legacy code, rebuilding **4 Go** REST APIs on parameterized queries.
- Remediated **20+** accessibility defects (keyboard navigation, screen reader labels, colour contrast) in a **Vue.js** frontend used across **29** Ontario ministries, bringing it to WCAG 2.0 AA and AODA compliance.

Loblaw Companies Limited Brampton, ON

Software Engineer Intern *May 2022 – May 2023*

- Built a **Java** and Spring Boot monitoring service that measures Oracle GoldenGate replication latency across **40+** tables via REST APIs and SQL, cutting lag detection from hours to under **5 minutes**.
- Built a **Python** replication service syncing MySQL, MongoDB, and PostgreSQL records into Oracle, exposing an idempotent REST upsert endpoint that batches **10,000+** records in under **2 seconds**.

Education

Toronto Metropolitan University | *Bachelor of Science in Computer Science* June 2025

Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, Go, Bash, PowerShell
Frameworks: Spring Boot, React.js, Next.js, Node.js, Express.js, Vue.js, Prisma, Quartz
Databases & Cloud: PostgreSQL, Oracle, MySQL, MongoDB, GCP, AWS, Azure (OpenAI, AI Search)
Messaging & Tools: Kafka, Google Cloud Pub/Sub, Apache Camel, PingFederate, Liquibase, Gradle
DevOps & Observability: Docker, Kubernetes, OpenShift, Jenkins, Datadog, Splunk, Snyk, SonarQube
