Experience

Associate Software Engineer March 2026 – Present
OMERS *Toronto, ON*

- Design and build **Java** and **Spring Boot** microservices that orchestrate pension transfers for **150+** specialists, replacing legacy software across **12+** transfer scenarios.
- Engineered a Spring Boot microservice integrating **PingFederate** for identity and access management, exposing **REST APIs** for user provisioning, role and group assignment, and **MFA** enrolment across all platform users.
- Engineered a multithreaded test orchestration service executing **200+** integration and end-to-end tests in parallel across **35+** workflows, leasing isolated test data per run to prevent concurrent runs from colliding.
- Led the upgrade of **15+** microservices from **Java 17 to 25** and **Spring Boot 3 to 4**, remediating breaking changes and deprecated APIs with zero production regressions.

Software Engineer Intern May 2025 – March 2026
OMERS *Toronto, ON*

- Engineered and architected the backend for a multi-plan pension transfer application across a **microservices** architecture in Java and Spring Boot, automating paper-based transfers from external pension plans and auto-initiating internal workflows for **500,000+** members, using Gradle, **Apache Kafka**, **Apache Camel**, and **Docker**.
- Designed **30+** RESTful APIs and the underlying relational data model for the transfer platform, authoring versioned **PostgreSQL** schema migrations in **Liquibase** and **Groovy** that deployed across **10+** services and 4+ environments without downtime.
- Resolved **10+** vulnerabilities through **Snyk**, ensured **80+% SonarQube** code coverage, configured **30+** business validations, designed **100+ JUnit** tests, and built **3+ Datadog** dashboards across enterprise microservices.

Software Developer Intern May 2024 – Dec 2024
OPTrust *Toronto, ON*

- Engineered a **Python** and **PowerShell** ingestion pipeline that parsed, validated, and loaded **30+** source files daily, applying schema validation and automated retries on malformed records to cut intake effort by **60**%.
- Built a **RAG** assistant on **Azure OpenAI** answering business and technical process questions, indexing internal documentation as embeddings in **Azure AI Search** for vector retrieval and fine-tuning **GPT-3.5 Turbo** on **300+** curated examples, cutting research time by **40**%.

Software Developer Intern May 2023 – August 2023
Ontario Public Service *Toronto, ON*

- Identified **3+** SQL injection vectors in legacy query construction through static analysis and code review, remediating them by rebuilding 4+ **GoLang** REST APIs on **SQLx** prepared statements and cutting endpoint load times by **6%**.
- Remediated **20+** accessibility defects in the **Vue.js** frontend across keyboard navigation, screen reader labelling, and colour contrast, bringing the application to **AODA** and **WCAG 2.0 AA** conformance for **29** Ontario Ministries.

Software Engineer Intern May 2022 – May 2023
Loblaw Companies Limited *Brampton, ON*

- Built a Spring Boot microservice in Java to calculate GoldenGate replication latency to **Oracle** via REST APIs and SQL, surfacing lag across **40+** replicated tables and cutting lag detection from hours to under **5 minutes**.
- Built a Python replication service moving **MySQL**, **MongoDB**, and Postgres records into Oracle, exposing an idempotent REST upsert endpoint for on-demand refreshes and batching **10,000+** records in under 2 seconds.

Education

Toronto Metropolitan University Toronto, ON
Bachelor of Science in Computer Science *Graduated: June 2025*

Skills

Languages: Java, TypeScript, JavaScript, Python, SQL, GoLang, C#, C++, C, Bash, PHP
Frameworks: Spring Boot, React.js, Node.js, Express.js, Vue.js, Angular, .NET, Flask, GraphQL
Databases & Cloud: PostgreSQL, OracleDB, MySQL, MongoDB, AWS, Azure, GCP
Infrastructure: Docker, Kubernetes, Jenkins, OpenShift, Kafka, Apache Camel, Gradle, Datadog, Splunk
