Experience

Associate Software Engineer March 2026 – Present
OMERS *Toronto, ON*

- Modernized **15+** workflows used daily by **150+** specialists, decomposing a legacy **PowerBuilder** monolith into event-driven **Java** and **Spring Boot** microservices that orchestrate multi-step transactions across services.
- Architected a test orchestration platform replacing manual regression, chaining reusable test steps into scenarios that pass live data between services, running **200+** end-to-end tests in parallel across **35+** workflows with scheduled runs and a **React** dashboard.
- Built the **IAM** layer for **3+** OMERS platforms, a Spring Boot service integrating **PingFederate** via **OAuth 2.0/OIDC** to manage provisioning, group management, **RBAC**, and MFA enrollment for all platform users.
- Built a **Quartz**-based scheduling service in Spring Boot that triggers time-based workflows across the platform by publishing **encrypted** events to **Google Cloud Pub/Sub**, with persisted job state in **PostgreSQL**.
- Migrated **30+** microservices from **Java 17 to 25**, **Spring Boot 3 to 4**, and **Kafka** to **Google Cloud Pub/Sub**, building a reusable **CLI AI Agent** skill to deliver, ship, and test within **1 month**.

Software Engineer Intern May 2025 – March 2026
OMERS *Toronto, ON*

- Built a full-stack pension transfer portal with a **Next.js**, **React**, and **TypeScript** frontend and event-driven Spring Boot microservices on **Kafka**, replacing paper-based transfers and auto-initiating internal workflows for **500,000+** members.
- Hardened production readiness across enterprise microservices by remediating **10+ Snyk** vulnerabilities, writing **100+ JUnit** tests to sustain **80%+ SonarQube** coverage, and building **3+ Datadog** dashboards for real-time monitoring.

Software Developer Intern May 2024 – Dec 2024
OPTrust *Toronto, ON*

- Engineered a **Python** and PowerShell ingestion pipeline that parsed, validated, and loaded **30+** source files daily, applying schema validation and automated retries on malformed records to cut manual intake effort by **60%**.
- Built a **RAG** assistant on **Azure OpenAI** for internal business and technical questions, indexing documentation as vector embeddings in **Azure AI Search** and fine-tuning **GPT-3.5 Turbo** on **300+** curated examples, cutting research time by **40%**.

Software Developer Intern May 2023 – August 2023
Ontario Public Service *Toronto, ON*

- Identified and remediated **3** SQL injection vulnerabilities in legacy query construction through static analysis and code review, rebuilding **4 Go** REST APIs on SQLx parameterized queries.
- Remediated **20+** accessibility defects in the **Vue.js** frontend, including keyboard navigation, screen reader labels, and colour contrast, achieving **WCAG 2.0 AA** and **AODA** compliance for **29** Ontario ministries.

Software Engineer Intern May 2022 – May 2023
Loblaw Companies Limited *Brampton, ON*

- Built a Java and Spring Boot monitoring service that measures **Oracle GoldenGate** replication latency across **40+** tables via REST APIs and SQL, cutting lag detection from hours to under **5 minutes**.
- Built a **Python** replication service syncing **MySQL**, **MongoDB**, and PostgreSQL records into Oracle, exposing an idempotent REST upsert endpoint that batches **10,000+** records in under **2 seconds**.

Education

Toronto Metropolitan University Toronto, ON
Bachelor of Science in Computer Science *Graduated: June 2025*

Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, Go, Groovy, C#, C++, Bash, PowerShell
Frameworks: Spring Boot, React.js, Next.js, Redux, Node.js, Express.js, Vue.js, Angular, .NET, Flask, GraphQL
Databases & Cloud: PostgreSQL, Oracle, MySQL, MongoDB, GCP, AWS, Azure
Messaging & Tools: Kafka, Google Cloud Pub/Sub, Apache Camel, PingFederate, Liquibase, Gradle
DevOps & Observability: Docker, Kubernetes, OpenShift, Jenkins, Datadog, Splunk, Snyk, SonarQube
